New Bone Graft Harvesting System 2

Safe and Rapid Harvest of Cancellous Graft

Acumed is pleased to announce the launch of the Bone Graft Harvesting System 2, which facilitates safe, rapid harvest of morselized autogenous cancellous graft from various sites in the body, including the calcaneus, distal tibia, iliac crest, and distal radius through a small skin incision.

This compact system is designed to be easy to use and includes five trephines with corresponding extruder paddles.

Clinical Corner: RibLoc® U Plus Chest Wall Plating System

Stronger and More Stable Rib Fixation

The RibLoc U Plus Chest Wall Plating System has U-shaped plate technology that provides stability with anterior and posterior locking screws. The advanced design of the plate offers a compressible U-clip to fit to a broad range of rib thicknesses.

A biomechanical study in the *European Journal of Trauma and Emergency Surgery* compares the RibLoc U Plus plate versus an anterior plate for the open reduction internal fixation of rib fractures. The study highlights the U plate's strong construct that provides additional support and strength for rib fixation.
