

ELECTRICITY

Whatever the weather you need to be able to bring the power when you're on the move in the electricity sector. Be it a call out to damaged cables or transformer units, you need to have all the right tools at your disposal. We help bring the power and get everything up and running with our compressor units and unique vans.

WE'RE ALSO INDUSTRY LEADERS IN INTERIOR AND EXTERIOR UTILITY VAN FITTINGS, MEANING YOUR VEHICLE IS TAILORED TO THE UPMOST QUALITY.

WHAT MAKES US THE MARKET LEAD?

Bring the power with you thanks to OBP Utilities' onboard compressor unit. Our driveline compressor can be fitted to the rear of many rear-wheel-drive vehicles and can deliver power through the van's prop shaft.

OBP units provide power for use in as many ways as you can think of. They provide a source for electric generators and power breakers. They can also power tools and other necessities such as on-site lighting when visibility is poor on a job.

PANELLING AND STORAGE

While power is paramount when driving a utility van in the electricity sector, you also want to be able to find the right tools and materials you need.

As part of our interior fitting service, which provide panelling for your van using:

- ✓ Plywood
- ✓ Fluted plastic
- ✓ Aluminum

From this, we can develop a bespoke racking unit that fits snug to your van's own specifications.

There's also the choice of shelving and bins for storing tools and small items such as screws and wiring, which in turn frees up space for larger equipment and cabling.

As part of our interior fitting service, we can also provide:

- ✓ Electric and lighting systems
- ✓ Partitioned areas
- ✓ Workbenches

SMART EXTERIOR SOLUTIONS

Practicality and style come together in our exterior fitting services; you can look the part thanks to our specialised livery service, which includes important safety aspects too.

- ✓ Computer-cut vinyl
- ✓ full-colour wraps for livery

SAFETY FIRST

- ✓ Hi-Vis reflective tape
- ✓ Panelling in the front and rear of your van
- ✓ Warning beacons and sirens
- ✓ Tailgates
- ✓ Rear steps

The extended time spent in your vans filled with specialist equipment warrants insurance-approved alarm and lock systems, which can be fitted should they be opted for.

THE POWER IS IN YOUR HANDS

Each fitting and installation of OBP units are tailored to your specific needs. You will get the opportunity to select the designs which are best suited to the electricity sector. We will advise you every step of the way

We also provide an excellent after-sales service which includes maintenance and breakdown support for all OBP units, no matter where you are in the country.
