

GAS

If you work in the gas industry, you will know how important it is to be able have your van ready to go at short notice. Emergencies can happen all the time, from faulty boilers to suspected leaks. Leaving customers cold is not ideal, so you need to be able to know you can jump in your van at any time and be ready for the challenge ahead.

WE CAN HAVE YOUR GAS VAN FITTED, INSIDE AND OUT, WITH EVERYTHING YOU NEED. FROM PANELLING, RACKING AND LIVERY TO ONBOARD POWER SOLUTIONS AND EXTERNAL SECURITY, WE'VE GOT YOU COVERED.

ONBOARD POWER WITH OBP UTILITIES

OBP can be provided in your gas engineer van thanks to our versatile driveline compressor unit. It can be used to power electric generators and smaller tools and equipment. The compressor unit is rear-fitted and delivers power through the van's prop shaft.

The onboard power unit can allow you to use items such as power tools, electric breakers and water pumps. It can also allow you to power lighting units which may be required when you are on a job outside of daylight hours.

PANELLING AND STORAGE

Putting your hand on the right washer or tool can be vital when you're out on the job as a gas engineering. That's why we offer a choice of superior interior panelling using:

- ✓ Plywood
- ✓ Fluted plastic
- ✓ Aluminium

Our bespoke racking solutions allow you to have the van interior that works for you. We provide a tailored service, meaning you can optimise their dimensions and, in turn, your workspace.

This also makes way for fitting partition systems and work benches, which can come in handy for pipe cutting and measuring.

EXTERIOR GAS VEHICLE SOLUTIONS

In addition to kitting out the inside of your gas van, we also offer bespoke exterior solutions. These include:

- ✓ Livery fitting – in computer-cut vinyl or full colour wraps
- ✓ Front and rear markings
- ✓ Hi-Vis reflective tape.

SECURITY

With a kitted-out van with a top-of-the-line onboard power system, you'll want to make sure everything is kept safe. We provide a fitting service for insurance-approved van alarm systems, as well as:

- ✓ Dead locks
- ✓ Warning beacons
- ✓ Sirens.

EXTENSIVE CONSULTATION PROCESS

Each of your vans can be fitted to your sector-specific needs and we will work with you every step of the way. We can offer solutions and advice about how to kit out your fleet to meet the daily challenges of working as a gas engineer.
