Why are we integrating with EasyPark?

- For on-street parking in many areas in Europe, a driver can either buy a parking ticket at a ticket machine, use a mobile payment option via SMS or an app like EasyPark.
- Parking sessions can be started and stopped via a mobile app, and drivers are only charged for the duration recorded.
- If a driver forgets to end the parking session with the app, their vehicle will still be considered parked and their parking fees will be higher than necessary.
- Telematics data can be used to end the parking session when the vehicle moves again, which helps businesses to reduce parking costs and automates one step of the parking process.

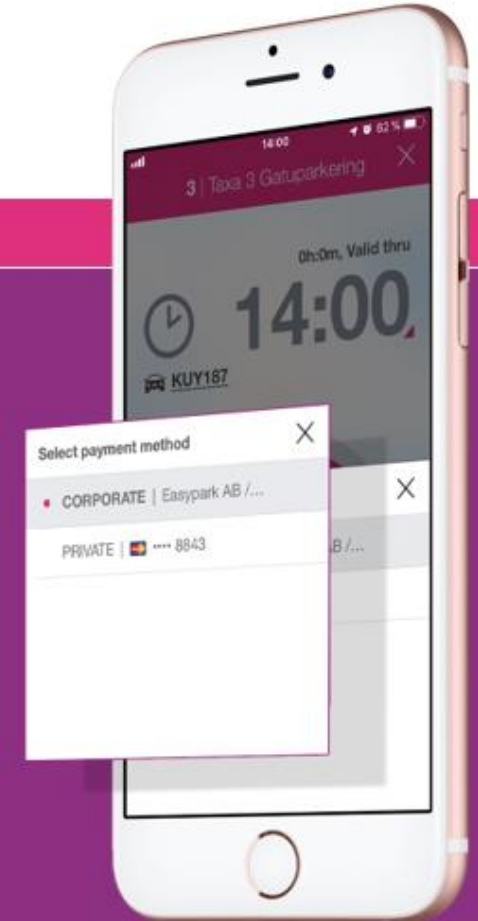

What's new?

Together with EasyPark, the number one parking app for businesses in Europe, we introduce Parking.connect, an integration between Webfleet and EasyPark platforms.

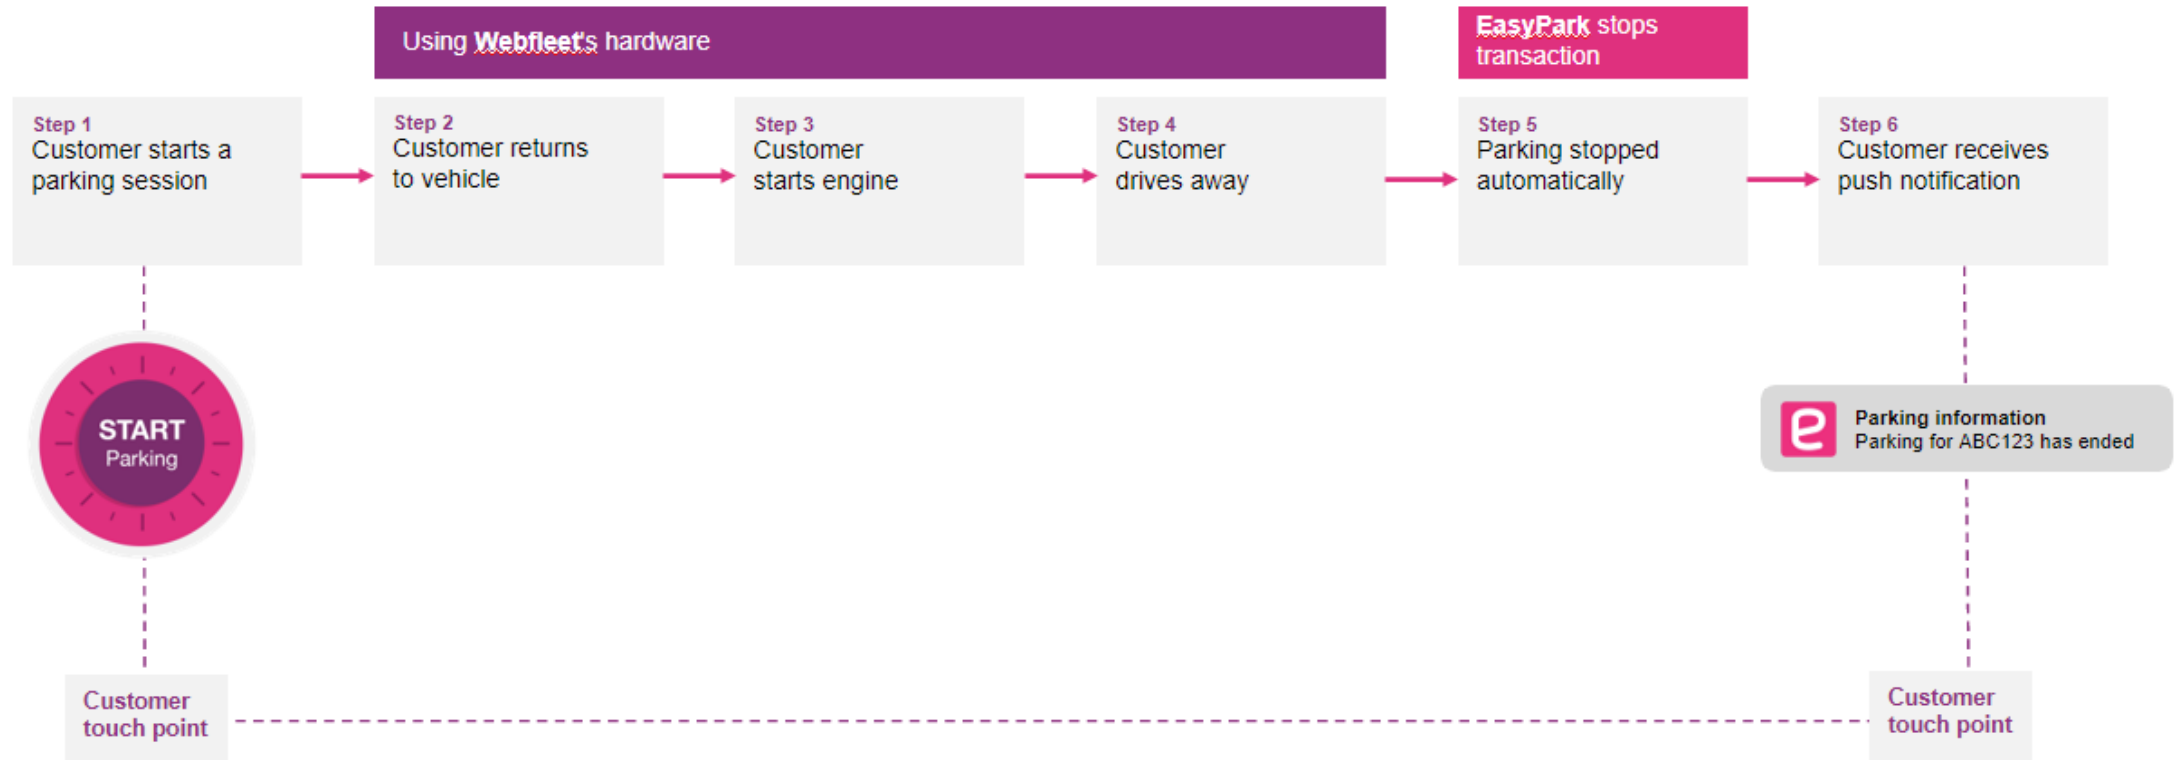

- The integration is available for customers who use both platforms.
- It allows Webfleet customers to remove a step from the parking process. Making the parking experience more convenient for drivers.
- Drivers require an EasyPark app to start the parking session.
- Drivers can simply drive away, using the vehicle movement to automatically end the parking session.
- This helps drivers to focus on their main tasks and helps businesses to save money by avoiding overpayments.

Save time and money when managing your business' parking expenses.

Parking administration. Made easy.

Customer journey

Value proposition at a glance

Audience	Pain points	Benefits	Proof points and value messages
Vehicle type: •Vans  •Passenger cars  •Electric vehicles 	•I am paying too much for parking that is not being used. •I am spending too long chasing parking payments from my employees.	Save time and money	Save time and money Save money for your business and hassle for your drivers with parking.connect.
Decision maker: •CFO/CEO •Fleet manager	•I want my drivers to be focused on the road •I am spending too much time and effort to enforce parking behaviours (stop ongoing sessions) •I want to remove a step from the drivers' daily task list.	Improve the driver's experience	Improve the driver's experience One less thing to think about. Ending a parking session is as simple as driving away.
Industries All Company size •>5 Vehicles	•I spend too long on digitalising processes / implementing new systems.	Set it up easily	Set it up easily Setting up is simple – no extra hardware is required. All you need is a subscription and a mobile device.

Highlights

Parking.connect ensures that ending a parking session is as simple as driving away. It offers:

- A simple setup
 - Customers can enable the integration directly in Webfleet.
- Cost savings
 - Customers won't have to pay more than necessary; they only pay for the time they were parked.
- Peace of mind
 - In a rush to get to the next appointment? With Parking.connect, drivers have one less thing to worry about.
- Data privacy
 - Vehicle data sharing between the platforms is limited to what is necessary to provide the service.

Feature overview

Simple to set up

The feature can easily be enabled or disabled by the fleet manager in the Webfleet administration module.

Data privacy

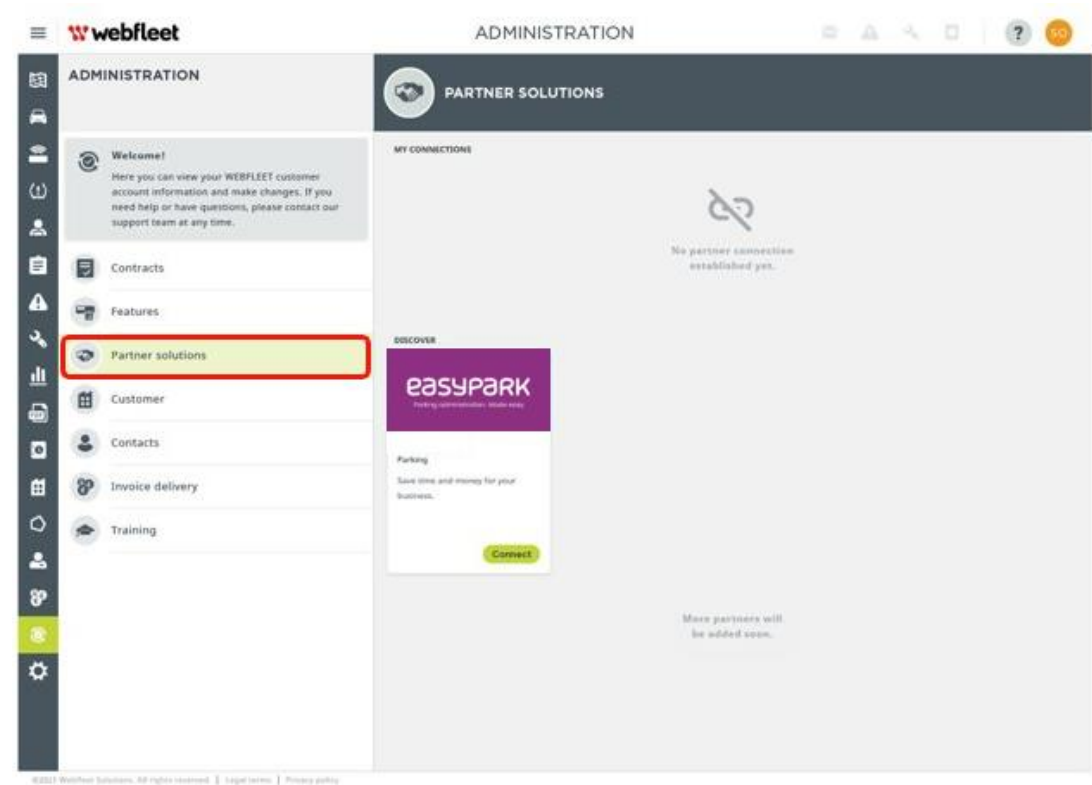

Vehicle data sharing between the platforms is limited to what is necessary to provide the service. The only data shared is the exact moment the vehicle is in motion again.

Notification

Customers receive a push notification within the EasyPark app when the parking session ends.

Benefits

Save time and money

Save money for your business and hassle for your drivers with parking.connect

Improve the driver's experience

One less thing to think about. Ending a parking session is as simple as driving away.

Set it up easily

Setting up is simple – no extra hardware is required. All you need is a subscription and a mobile device.

What's required for the EasyPark integration solution?

Hardware

LINK

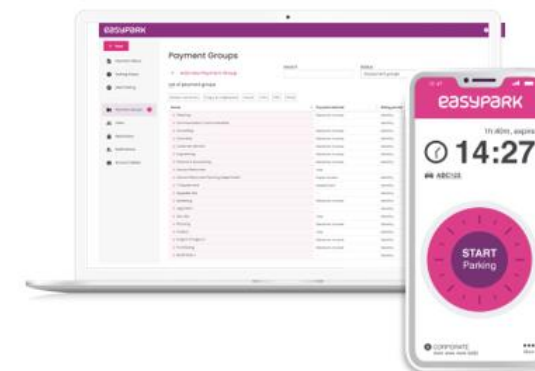

245/610/640/710/740*

Webfleet
subscription**

EasyPark
subscription***

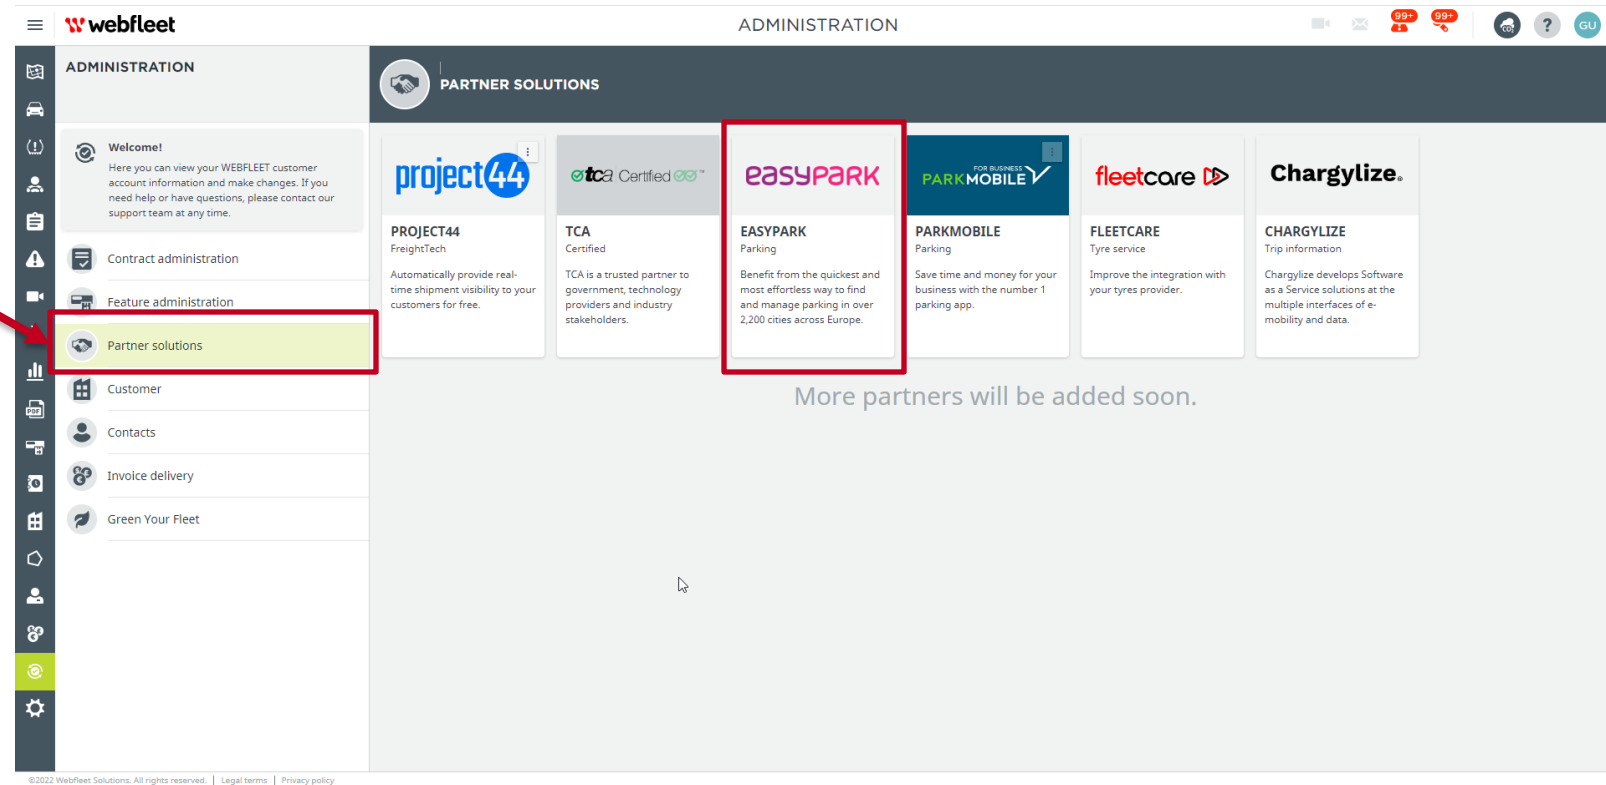

* Also works with the LINK 2x0/410/510 but may provide a lower reliability and slower response time between driving away and termination of the parking session.

** Included in all Webfleet LINK or higher subscriptions in the Netherlands. No additional Webfleet fee for the EasyPark integration.

*** Customers require a EasyPark subscription plus an additional payment for the integration (Autostop): local prices apply

Process: Parking.connect activation

The Parking.connect can be enabled or disabled by the fleet manager in the Webfleet administration module under Partner solutions.

Process: Parking.connect activation

Customers need to select the desired vehicles in Webfleet to enable the Parking.connect and start sharing vehicle data with EasyPark.

The screenshot shows the Webfleet Administration interface. The left sidebar contains the 'ADMINISTRATION' menu with options like 'Welcome!', 'Contract administration', 'Feature administration', 'Partner solutions' (highlighted), 'Customer', 'Contacts', and 'Invoice delivery'. The main area is titled 'ADMINISTRATION' and 'ADD VEHICLE'. It shows a table of vehicles with columns: Number, Vehicle No., Vehicle n., Status, Terminat., and Vehi... Two vehicles are selected, highlighted in green, and enclosed in a red box:

Number	Vehicle No.	Vehicle n.	Status	Terminat.	Vehi...
DEMOCASE23ST	2545	MI3445Q00060	Active	---	TMDMOKOFF...
MI3445Q00054	2556	MI3445Q00054...	Active	---	---
---	2555	MI3445Q00079	Active	---	---

Below the table, it says 'Selected: 2' and shows two vehicle IDs: '01-01115' and 'DE01-02456'. At the bottom right, there are 'Cancel' and 'Next' buttons.

Process: Parking.connect activation

Customers then need to enter their EasyPark billing account number.

If they don't have it, they'll need to contact EasyPark customer service.
