The agentic AI close management platform that does the work, not just the tracking

- Agentic checklist & controls
- Continuous account reconciliation
- AI-generated working papers
- AI-powered journal entries
- AI-powered journal entries

Stay ahead without the manual work

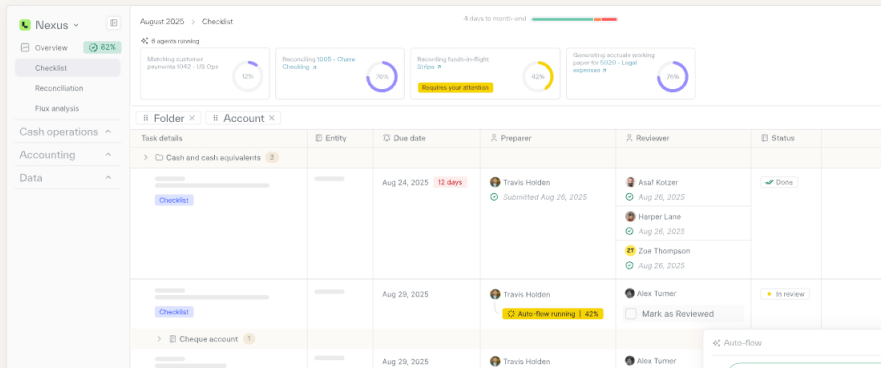

- Start with live data from your ERP and banks already pre-populated instead of using blank templates.
- Spot risks and avoid bottlenecks with automatic alerts about delays in dependency tasks.
- Capture the full audit trail in one system as you go with built-in approvals, evidence, and traceability.

Why finance teams choose Ledge

- AI agents do the work**
Unlike with other tools, the close isn't just tracked or reported, it's done for you.
- Books are always updated**
Daily cash application, recurring JEs, and reconciliation keep you up-to-date all month long.
- Audit-ready by design**

Every JE, reconciliation, and working paper is tied directly to source data.

Book a demo

Close the books without the burden

Stop worrying about gaps in your audit trail

AI agents create journal entries tied to reconciliation and working papers, route them through built-in approval workflows, and tie all entries back to source data.

Skip the manual, repetitive busy work

AI pulls in the data so accountants start with a complete, structured working paper instead of a blank spreadsheet. This reduces the pressure and effort it takes to close.

Stay agile - no IT required

Finance teams control the rules, update workflows and own automation end-to-end, without relying on IT, consultants, or engineers.

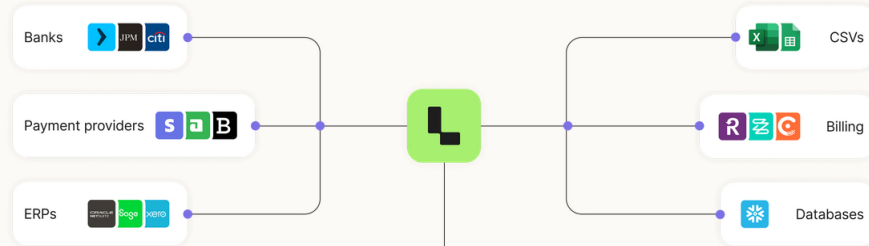

No more fragile, fragmented reconciliation

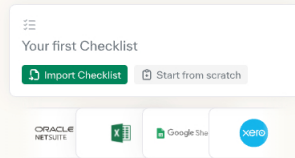

AI agents continuously ingest data from NetSuite, banks, payment processors, and other systems, and perform both two-way and multi-way matching against GL activity.

From checklist to close powered by AI agents

How it works

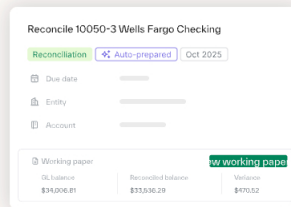

AI prepares the close for you

Reconciliations, journal entries, working papers, and flux explanations come pre-populated with data and draft work — so you never start from scratch

Import your checklist

Start instantly by bringing your existing close checklist into Ledge

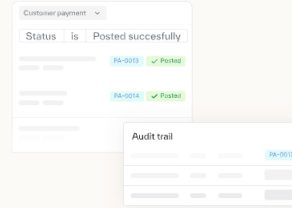

Review and approve with context

Tasks open with evidence attached and exceptions flagged, so your team can focus on review, edits, and approvals instead of manual rebuilds

↶ Regenerate ✓ Approve

Keep records up to date and audit-ready

Entries post directly to your ERP, reconciliations tie out continuously, and every record links back to source data with a complete audit trail

✓ Close Complete

Built for modern finance teams

CFOs & VPs Reduce risk, improve cash flow and increase confidence →	Controllers Own the close process with fewer surprises →
AR & Billing leads Accelerate cash, keep aging clean and stop chasing manual matches →	Accounting team Close faster and focus on insights, not just manual cleanup →
Operations Provide answers & close tickets fast →	Your Team More visibility & control without the R&D effort Book a demo

Got a question about close management?

How is Ledge different from FloQast or other close platforms? -

Unlike other close management tools that focus on organizing and tracking close tasks or reporting progress, Ledge actually performs the work. Ledge embeds AI agents directly into workflows, so reconciliations are matched, working papers prepared, and journal entries drafted automatically before your team even starts their day.
