Why AI voice in higher education?

Create more learning content, faster
Remove the slowest step in course and training development. Create and update educational content and training modules with AI voiceovers you can re-render instantly.

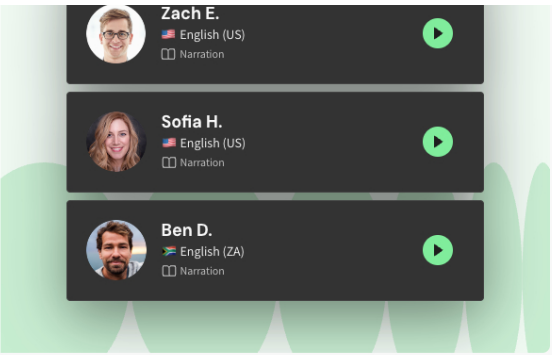

Support faculty adoption with realistic, human-quality AI voiceovers
Let educators hear the difference in their educational content and training modules. Clear, warm narration that enhances teaching and improves learner engagement.

Meet accessibility and equity standards
Export editable SRT/VTT caption files and offer multilingual AI voiceovers to make every training module and piece of educational content accessible to all learners.

Hear it for yourself

WellSaid's AI voices are built with professional voice talent and designed for clarity and trust. Each one sounds natural, consistent, and ready for any message that matters.

The AI voice platform built for learning teams

Paste, edit, or upload scripts

Drop in text and generate lifelike voice instantly. Update anytime with unlimited retakes

Choose your voice

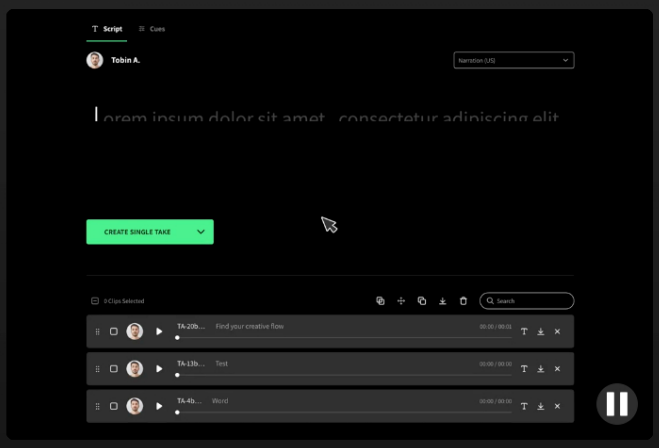

Select from a wide range of professional voices suited for lectures, tutorials, orientation, or policy training.

Adjust & customize

Fine-tune pronunciation, pacing, and tone to match instructional intent and terminology.

Share & collaborate

Shared workspaces keep instructional designers, media teams, and faculty aligned.

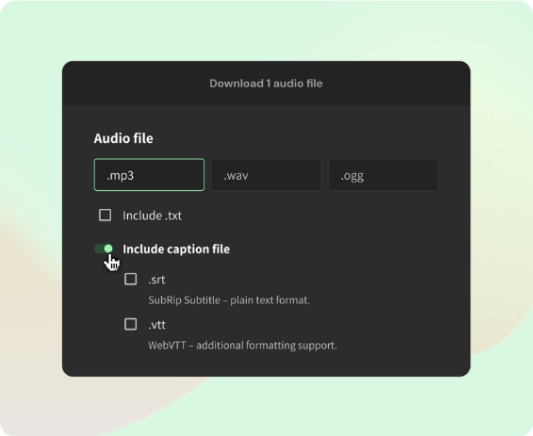

BUILT FOR CLARITY

Make content clear, accessible, and evergreen

Help learners understand. Help faculty and training teams stay aligned.

- Convert lecture scripts and course modules into polished voiceovers for LMS or hybrid learning.
- Create HR, safety, onboarding, and compliance training consistent across departments.
- Narrate student support materials, orientation resources, and campus service guides.
- Keep content evergreen — when wording changes, update narration without re-recording.

Make voice content accessible and inclusive

Reach more people with inclusive, multilingual AI voices. Support customers with disabilities or language barriers and meet ADA and WCAG standards.

- Export SRT/VTT caption files for accessibility review workflows
- Offer narration in multiple languages to support diverse student populations
- Maintain consistent voice and pronunciation across course updates
