1 Concrete, but greener

Boral's Envisia concrete mix offers a lower-carbon option for structural or decorative concrete work. By replacing part of the Portland cement with slag and fly ash, industrial by-products that would otherwise go to waste, Envisia reduces embodied carbon while still providing the strength needed for slabs and footings. It handles much like standard concrete, with regular setting and finishing times, and offers long-term durability with minimal shrinkage and cracking. For polished or decorative floors and walls, Envisia can also be used as the base mix for Boralstone polished concrete.

2 Lounging around

The Lani Lounge Chair turns post-consumer plastic into a durable, everyday piece of furniture. Made in Australia from 100 per cent recycled HDPE sheets, a dense, smooth plastic perfect for furniture, each chair diverts 17 kilograms of plastic from landfill. The flat-pack design slots together without screws or tools, and its gentle recline and V-shaped back deliver easy comfort. UV-treated and naturally waterproof and mould-resistant, Lani is low-maintenance and built to last. Each chair is \$720.

3 What a corker

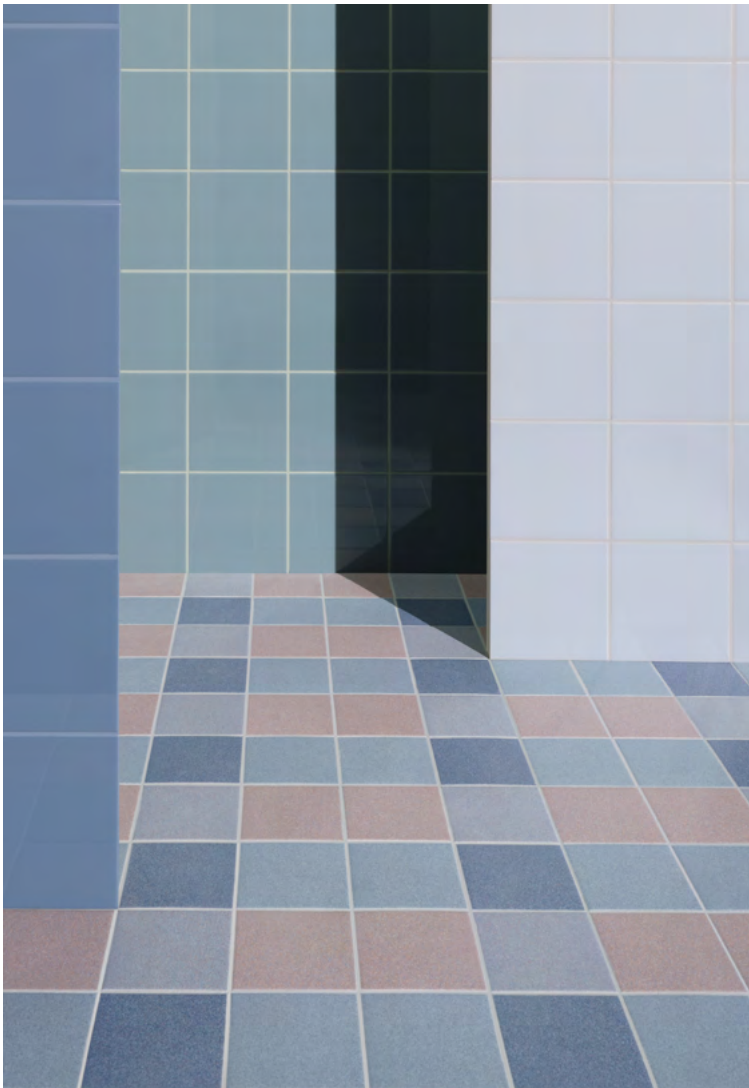

CorkArt tiles offer a natural, renewable option for floors and walls, bringing warmth and acoustic comfort to the home. Cork is harvested from the bark of cork oak trees without harming the tree, making it a low-impact material with good thermal and sound insulating qualities.

The tiles also include recycled cork, and use low-VOC finishes for healthier indoor air. Lightweight, durable and biodegradable, they're comfortable underfoot as well.

Available in a range of tones and textures.

4 Timeless tiles

Mosa has been making tiles for more than 130 years. Its Global Collection uses a circular design approach to minimise waste and energy use: each tile includes up to 45 per cent reclaimed materials from Mosa's own production process, plus calcite recovered from drinking water treatment, creating strong, well-finished porcelain surfaces. The rest of the ingredients are natural materials such as chalk, clay and sand, resulting in a durable, lower-impact tile. The range includes a mix of colours, sizes and finishes. The collection is Cradle-to-Cradle Gold certified and distributed in Australia by Academy Tiles.

5 All curves

It seems harsh to call this minimalist, sculptural vessel a bin! The Lulu Bin from Special Studio turns everyday waste into a design feature. Locally 3D printed from 100 per cent recycled plastic, it's part of the studio's circular production model, reducing plastic waste and avoiding the need for new materials. Lightweight yet sturdy, Lulu is built to last and can be recycled again at the end of its life. Use it as a waste bin, a storage container, or something more creative. Available in two sizes and many colours; prices start at \$140 for the Mini version.

6 Better benchtops

Eco Surfaces benchtops turn waste into a beautiful kitchen surface. Made from 100 per cent recycled glass – often hundreds of bottles per slab – they offer a safe alternative to quartz and engineered stone, with no crystalline silica-related health risks. Durable and resistant to scratches, stains and heat, they stand up to everyday cooking and cleaning. Subtle variations in colour and texture give each slab its own character, providing a modern, eye-catching alternative to traditional stone.

7 Pod power

The Ohme ePod is a compact home EV charger designed to make electric driving cleaner and easier. It delivers fast 7-kilowatt charging and can automatically top up your car when electricity is cheapest or when surplus solar generation is available. The Ohme app lets you track charging, set limits and manage costs in real time. The unit has a three-year warranty and is rated IP54 for water resistance, so is suitable for both garages and sheltered outdoor locations.

8 Modern cladding

MagnumBoard is a magnesium oxide board cladding option that's silica-free and has a lower carbon footprint than fibre cement products. The boards are vapour-permeable, reducing moisture and the risk of mould: important in more airtight builds. Lightweight but tough, MagnumBoard resists fire, pests and weather for stable performance in the Australian climate. McCormacks Australia supplies the product in shiplap or bevelback weatherboards (pictured), as well as floor linings and wall sheets.
