Clinical study opportunities

What is a clinical trial or study?

Clinical trials are research studies in which people help doctors find ways to improve health and treat diseases. The results of these research studies, called outcomes, give health care providers the data necessary to make advances and improvements in the way doctors treat or prevent disease.

OHSU participates in hundreds of trials in a variety of scientific areas and diseases and this would not be possible without thousands of Oregonians and others who volunteer.

Why participate?

Your research participation will be alongside expert OHSU doctors, nurses and staff at cutting-edge facilities right in your own community. Your time and contribution can help current and future patients with the same disease and frequently study participation is compensated.

Who can participate?

Both children and adults who are healthy or have medical conditions can potentially qualify for a clinical study.

Search for study opportunities

To browse OHSU study participation opportunities visit **www.ohsu.edu/research/rda/so/index.php**. You may also visit **www.researchmatch.org** for additional opportunities. ResearchMatch is a national volunteer research registry that brings researchers and volunteers together.

For questions regarding your rights as a research subject, contact the OHSU Research Integrity Office at 503 494-7887.
